ABSTRACT

Here I have developed a project on Tour and Travel. Online Tour and Travel Booking is a system that gives you the facility of booking any type of packages (Summer special packages, Manali tour packages, Shimla special packages, adventures etc). This system is made, so that customer can easily book ticket for all packages of tourist place such as hills, trekking, adventures, spirituals and user can also register for hotels for different types of room.

The project 'Tours and Travels' is developed to replace the currently existing system, which helps in keeping records of the customer, details of destination as well as payment received. It saves the precious asset that is time, and also accuracy, reliability and uniformity can be maintained. This project is useful for the manager of the company as it helps them to search the data faster than existing system, to get customer record easily and report of the customer payment, etc are generated as per requirement.

Details of different types of tours which include tours like family tours, couple tours, general tours, date and time of departure and the fair of the tours etc are maintained. Through this site we can provide different types of travel packages to the customers. This sites provide everything related to it itineraries.

This site gives new packages on flexible price, so that user can book easily. According to season admin can change packages. We revise our itineraries regularly. Vacation-O-City offers a large range of travel opportunities. Tours and Travels Project is designed in asp.net programming language, and SQL server used for this site.

In this site, Admin can add packages, add destinations (adventures, spirituals), add hotels details, and delete hotel details. Admin can also add different types of rooms.

INTRODUCTION

The purpose of this paper is how the world is developing and changing the face of tour and travels industry. Travel and tourism industry is one of the world's great industrial sectors. It drives economic growth, creates jobs, improves social development, and promotes peace. The tourism sector provides employment to hundreds of millions of people. In some island economies, travel and tourism industry is not just the biggest employer, it is effectively the only employer. The role is to contribute to the creation of sustainable economies. Travel and tourism industry is a diverse sector consisting of millions of companies and employers, from the biggest global travel brands to the smallest tour operator or hostel owner. Together we form a formidable force with a voice to be heard at the highest levels of society and government.

PURPOSE

The purpose of this paper is to determine how the tourism and tourism industry changes and develops globally. The tourism and tourism industry is one of the largest industries in the world. It promotes economic growth, creates jobs, promotes social development and promotes peace. Hundreds of millions of people around the world rely on this industry for employment. In some of the island economies, the tourism and tourism industry is not only the largest employer, but also the only employer. The role of contributing to the creation of a sustainable economy. The tourism and tourism industry is a diverse sector that includes millions of companies and employers, from major international tourism companies to the smallest tourism provider or hostel owner. Together we create great power with a voice that will be heard at the highest levels of society and government.

MODULES

Number of modules

After careful analysis the system was identified to have the following modules:

1. Director module
2. Navigation module
3. Route module
4. Booking module
5. Evidence module.

18

1. MANAGER MODULE:

This module provides administrator-related functionality. The controller handles everything information and has the right to access, delete, edit and view location-related data, trips, routes, reservations, restaurants etc.

2. TRAVEL MODULE:

This module provides details of various travel agencies. User can select the appropriate agency depending on the comfort and accessibility.

3. ROUTE MODULE:

This module provides information related to the various sources of network connectivity as well

destinations. For each route, information such as source, location, fare, booking details, pick up points etc. provides. Only the controller can add, remove, edit again manage data. Users can only view information.

4. APPLICATION MODULE:

This module provides services that allow the user to book tickets or cancel

tickets were pre-booked. The module keeps track of all bookings made that way remotely and allows the administrator to confirm or refuse bookings.

5. EVIDENCE MODULE:

Users of this app can post their comments, complaints and suggestions about this portal and services to the administrator. Accordingly, the administrator can take various steps to deal with complaints and suggestions

Scope of Upcoming Application

This project can be applied to tourism agencies. This site is about a variety of travels agencies, their packages, and information about the routes of various places in India.

Care and maintenance procedures should be established to ensure 100% success.

online program implementation. In the event of a system failure, the organization should be able to process a transaction with another organization or in the event of a serious misconduct worst of all, it has to be in a position to finish it in person.

Scope of Development

Care and maintenance procedures should be established to ensure 100% success.

computer system implementation. In the event of a system failure, the organization should be able to process work with another organization or if it is very bad

when it gets worse, it must be in a position to finish it in person. This project can be

used in Travel Mastii Pvt. Ltd by adding some useful modules to the project

as an account for all regular guests then it will be a full power solution.

Care and maintenance procedures should be established to ensure 100% success.

implementation of Computer Travel Agency operations. In the event of a system failure, the organization must be able to process the transaction with another

organization or if the worst comes the worst, it should be able to eliminate it

by hand.

Research Method

This project is designed to meet the needs of mobile agencies. This is it upgraded to JSP, remembering system details.

The system design uses simple data flow diagrams

COUNCLUSION

In other words, in line with the increase in the demand for tourist services, a distinct offer of services has gradually developed, whose volume and structures imposed the organization and continuous improvement of an economic and organizational program able to guide the services provided by tourists. According to the steps, a tourist travels from the permanent residence to the destination and back, e.g. there is a complex of activities designed to meet the various consumption needs. The growing volume and complexity of tourism services have generated the development of a real tourist industry that justifies treating the phenomenon of tourism as a distinct branch of the growing economy in the world. By its nature, the tourism phenomenon is a particularly complex, with profound social, political, cultural and economic implications. Unlike other service sectors, the tourism industry remains a consequence whose development at each stage can only be ensured in close correlation with the levels of development of other branches of the world economy.
